

Industrial Air Filtration Solutions

— for Distributors

High-Performance Products. Reliable Support. Strong Margins.

As an industrial distributor, you need high-quality air filtration solutions that provide value to your customers while ensuring strong profitability. Air Quality Engineering (AQE) delivers proven, high-demand filtration systems that help your clients achieve cleaner air, improve compliance, and reduce operational costs—with durable products designed for long-term performance.

Expand Your Product Line with AQE

Distributors partner with AQE to offer a wide range of air filtration solutions that meet industry demands. Our team provides expert guidance, marketing support, and dependable products that keep your customers satisfied and returning for future purchases.

Many AQE systems feature electrostatic filtration, offering green, low-energy air cleaning with reusable filters—eliminating consumables and maximizing long-term savings.

Ask your AQE representative about electrostatic options for welding, smoke, and mist applications.

Why Distributors Choose AQE

High-Demand Solutions

A trusted brand with proven products that customers rely on for compliance and air quality control.

Strong Margins & Sales Support

Competitive pricing, strong profitability, and the tools to help you sell more effectively.

Reliable Partnership

A dedicated team providing product training, technical support, and fast, reliable fulfillment—so you can confidently deliver solutions on time.

Offer the Best Filtration Solutions to Your Customers

AQE provides a diverse range of air filtration systems designed for industries including manufacturing, metalworking, and commercial applications. With a reputation for reliability and innovation, our solutions make it easy for you to deliver quality products to your customers.

Mist & Oil Smoke Collection

Our mist collection systems handle oil smoke and coolant mist from CNC machines and EDM operations. With electrostatic or media filtration, they support source or ambient capture in airflow ranges up to 8,000 CFM. Units can be direct-mounted to machines or installed on ceilings, pedestals, or floors.

Welding Fume & Particulate Collection

For welding and metal fabrication, AQE systems offer source and ambient capture of smoke, fumes, and hexavalent chromium. Filtration options include electrostatic, media, and HEPA with CFM capacities from 225 to 6,000. Units can be wall or ceiling mounted, portable, or ducted depending on your shop layout.

Smoke, Process Dust & Nuisance Particles

These high-capacity systems manage airborne dust, smoke, and fine particles in industrial spaces. Available with electrostatic or media filtration, they offer source or ambient capture from 1,000 to 8,000 CFM. Mounting options include floor, wall, ceiling, or portable configurations for flexible integration.

💡 These featured products support a range of industrial applications. Many of our systems work across multiple needs—connect with an AQE rep to determine the best solution for your customers' facility.

For over two decades Dynacom, Inc. has worked collectively with Air Quality Engineering to help our customers solve their air filtration requirements. Air Quality Engineering has continuously provided quality products at fair prices with exceptional customer service making them an excellent supplier to Dynacom, Inc.!
